

SUREHITTER[®]

Parents, Do You Have A Young Child Playing Baseball or Softball? Want to Make A Big Difference in His or Her Progress?

For all young players it's crucial to correctly learn how to hit and catch a baseball or softball. This will make all the difference to a lifetime of playing.

Now any parent can do at home the three most important things their child needs to insure their success:

1. Eliminate the reflex fear of an approaching ball.
2. Form skills quickly by teaching at the child's own pace.
3. Reinforce those skills through a large number of hitting and catching repetitions.

Team practices often cannot provide the one-on-one instruction necessary to meet these vital learning needs.

So how can you achieve them at home? The same way you did when your child first wanted to ride a 2-wheel bike!

You used *Training Wheels*! Instantly, reflex fear of the bike falling over was gone, and skills formed quickly because your child was learning on a real bike at his or her own pace. Attempts to ride were eagerly repeated until soon the training wheels were discarded and your child could ride at will!

So what's needed is the equivalent of "Training Wheels" for baseball or softball so young players can quickly learn how to hit and catch!

This is exactly how the **SUREHITTER** teaching system works. It removes all fear of being hit while the player is still actually hitting or catching a real moving ball. Just like training wheels, it's done under real playing conditions but slowed down to the child's learning pace. So learning is remarkably fast! And you can build skill level by giving your child any number of hitting or catching repetitions either outdoors or indoors. Nothing else matches the **SUREHITTER** for easily, safely and quickly teaching or improving your young player's hitting and catching.
